AMF classification: International equities

Objectives: AMF (Autorité des Marchés Financiers) classification: International equities.
By subscribing to AMUNDI ETF MSCI EUROPE ENERGY UCITS ETF, you are investing in a passive management UCITS whose objective is to replicate, as accurately as possible, the performance of the MSCI Europe Energy 20/35 index (the "Index") regardless of its performance, positive or negative. The maximum tracking error objective between the growth of the net asset value of the Fund and that of the Index is 2%.
The Index, net dividends reinvested (the net tax dividends paid by the equities composing the index are included in the calculation of the index), denominated in euro, is calculated and published by the index provider MSCI.
You are exposed to currency risk between the currencies of the equities that make up the Index and the currency of the Fund. However, you are not exposed to the currency risk between the currency of the index and the currency of the fund.
The shares comprising the MSCI Europe Energy 20/35 index are derived from the universe of European companies in the energy sector.

More information about the composition and rules on how the index works are available in the prospectus and at msci.com.
The index is available via Reuters (dMIEU0EN0TNEU) and Bloomberg (M7CXAMAR).
In order to replicate the Index, the UCITS exchanges the performance of the assets held by the Fund against that of the Index by concluding a forward exchange contract or "total return swap" (synthetic replication of the Index).

The Fund's net income as well as its net realised capital gains are reinvested or redistributed at the discretion of the management company.

You can resell your units during the opening hours of the various stock exchanges provided that the Market Makers are able to animate the market.
