What is this product?

Type:
This product is a UCITS fund.

Term:
This is an Open Ended Fund.

Objectives:
The Fund's investment objective is to generate returns that closely correspond, before fees and expenses, generally to the price and yield performance of the CBOE NASDAQ-100® BuyWrite V2 UCITS Index (the **"Index"**).
The Fund is passively managed. The Fund will aim to achieve its investment objective via a swap, which is an agreement between the Fund and an approved counterparty, where the Fund will swap the performance/return of a basket of global equity securities and equity related securities with the counterparty in exchange for the return of the Index minus any associated fees (the "**Swap**").
The Investment Manager may decide from time to time to switch partially or totally between using the Swap to replicate the performance of the Index or investing directly in global equities and equity related securities (which may include common stock and preferred stock) that, as far as possible and practicable, consists of the component equity securities of the NASDAQ-100® Index (the "**Reference Index**") and by selling corresponding call options on the Reference Index and covering such options by holding the securities underlying the options written.
The Fund follows a "buy-write" (also called a covered call) investment strategy in which the Fund buys an equity security or a basket of equity securities, and also sells corresponding call options. The strategy will generate income in the form of options premium while potentially limiting the increase in equity value of the basket of securities, if options are exercised.
The Index each month measures the performance of a portfolio of the equity securities included in the Reference Index while it also sells a succession of one-month at-the-money covered call options on the securities in the Reference Index, which are held until one day prior to the expiration dates and are liquidated at a volume-weighted average price determined at the close.
When not possible or practicable for the Fund to invest in the Swap, the Fund may invest in depositary receipts relating either to components securities of the Index or to equity securities of the type referred to above; and financial derivative instruments ("**FDIs**"), namely, options and futures for investment purposes.
The Fund may enter into securities lending transactions, investing in repurchase and reverse repurchase transactions and short-term money market collective investment schemes, for the purposes of efficient portfolio management only.
The Fund's base currency is USD.

For Distributing Shares, income will be paid in the form of a dividend.

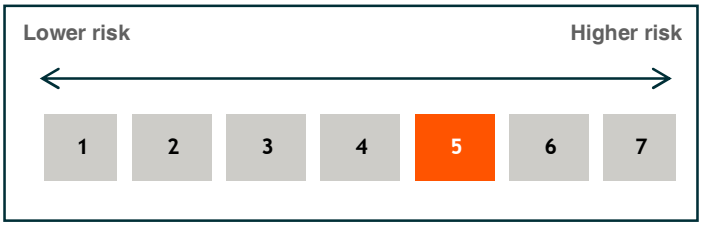

Investors can buy and sell shares of the Fund on each business day. Business day means a day on which the New York Stock Exchange is open for normal business.

For more information about the investment policy and strategy of the Fund, please refer to the sections entitled "Investment Objective" and "Investment Policy" in the Fund's supplement.

Intended retail investor:
This Fund is intended for investors who want to take a long or short-term exposure to the market covered by the index of the Fund and would be prepared to take on a medium level of risk assoicated with an investment of this type, including potential volatiltiy of such market. Such an investor must also be one that is able to assess the merits and risks of an investment in the Shares of the relevant Class of the Fund.

What are the risks and what could I get in return?

Risk Indicator

The risk indicator assumes you keep the product for 5 years.
The actual risk can vary significantly if you cash in at an early stage and you may get back less.
The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 5 out of 7, which is a medium-high risk class. This rates the potential losses from future performance at a medium-high level, and poor market conditions will likely impact the ability for you to receive a positive return on your investment.
Be aware of currency risk. You will receive payments in a different currency, so the final return you will get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.
For other risks materially relevant to the product which are not taken into account in the summary risk indicator, please read the product's Annual Report or Prospectus available at www.globalxetfs.eu.
This product does not include any protection from future market performance so you could lose some or all of your investment.

Performance scenarios

The figures shown include all the costs of the product itself, but may not include all the costs that you pay to your advisor or distributor / and includes the costs of your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

What you will get from this product depends on future market performance. Market developments in the future are uncertain and cannot be accurately predicted.

The unfavourable, moderate, and favourable scenarios shown are illustrations using the worst, average, and best performance of Global X NASDAQ 100® Covered Call UCITS ETF over the last 10 years.

What happens if Global X Management Company LLC is unable to pay out?

You may face a financial loss should the manufacturer or depositary/custodian, SEI Investments – Depositary and Custodial Services (Ireland) Limited, default on their obligations.

There is no compensation or guarantee scheme in place which may offset, all or any of, this loss.

What are the costs?

The person advising on or selling you this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.

Costs over time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product and how well the product does. The amounts shown here are illustrations based on an example investment amount and different possible investment periods.

We have assumed, in the first year you would get back the amount that you invested (0 % annual return). For the other holding period, we have assumed the fund performs as shown in the moderate scenario and the investment is USD 10,000.

Investment: USD 10,000	If you exit after 1 year	If you exit after 5 years
Total costs	45 USD	395 USD
Annual cost impact (*)	0.5%	0.5%

(*) This illustrates how costs reduce your return each year over the holding period. For example it shows that if you exit at the recommended holding period your average return per year is projected to be 14.0% before costs and 13.5% after costs.
